Rock-Away Water Closet Attachment

Background of the Invention

It is well known that dogs when relieving themselves, go through a series of pumping motions while walking, slowly, which enables the dog to gradually eject the stool from his body.

In a similar manner, a person, will find relief by rocking front-to-back, or side to side, continuously, on a spring supported, stool seat, until the bowels are discharged.

The "Rock-Away," will be particularly useful to those adults, and children, subject to constipation.

SUMMARY OF THE INVENTION: The Rock-Away

- a.) The device is clipped into place atop the toilet seat by sliding the clips into place.
The Rock-Away can be readily lifted, and removed from the toilet seat by removing the 4 clips.
- b.) The Rock-Away is designed to be light, compact, easy to attach.
- c.) The four spring units and the stool seat will not be exposed since they are inside (2) layers of abrasive resistant nylon.
- d.) The Rock-Away will have the same shape as the toilet seat.
- e.) The Rock-Away may be used by both children and adults.
